Art Unit: 2838

1. The information disclosure statements submitted on September 1, 2004 and September 22, 2004 have been considered by the examiner. However due to the extreme number of references cited (271) by the two information disclosure statements and because applicant has not indicated in any way which references are more pertinent than the others, a careful and detailed evaluation of each and every individual reference could not reasonably be provided. Thus the cited references have been given the same consideration as the rest of the prior art normally searched by the USPTO in the normal course of examination of a patent application, i.e. briefly scanned for pertinence and relevancy to the recited invention and deeper review given only to those deemed noteworthy. It is also noted that some of the cited references "got lost in the shuffle" and could not be considered at this time since no copies of those references were found by the examiner with the information disclosure statements (noted by the notation "no copy"). Duplicate citations between the two information disclosure statements were noted as considered on the September 1, 2004 information disclosure statement but lined through on the September 22, 2004 information disclosure statement.

2. The following prior art is made of record and not relied upon by the Examiner in forming a rejection is nevertheless considered pertinent to applicant's disclosure.

Meszlenyi (US 5,612,860) and Grimm (US 5,9555,872) are cited to show power converters with current limiting circuitry old and known in the art at the time of the invention.

3.

REASONS FOR ALLOWANCE

The claimed invention of a power converter current limit circuit is found to be allowable over the prior art since a power converter current limit circuit comprising a steady state current limit circuit that reduces an average current value through an inductor in the power converter to a steady state threshold during a transient phase and regulate the average inductor current value to the steady state threshold responsive to an overcurrent condition in addition to comprising a cycle by cycle current limit circuit that reduces instantaneous inductor current after the instantaneous inductor current equals or exceeds a maximum threshold during the transient phase was not found to be singularly or collectively taught by the prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the Issue Fee and, to avoid processing delays, should preferably accompany the Issue Fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jeffrey L. Sterrett whose telephone number is (571) 272-2085. The examiner can normally be reached on Monday-Thursday & 8:00am-5:00pm.
